

Bags in rolls are made of eco film PLART™. A unique blend of innovative technical polymers guarantees high mechanical resistance to perforation and elongation, greater than traditional low density bags. With a thickness up to a 55% lower than our competitors we can provide clear advantages, from a logistic point of view and for the single cost of each bag. Also, using less material from non renewable source guarantees a greater respect for the environment. All the bags are produced with star bottom sealed, ensuring excellent resistance to weight and liquid leak, with paper bands (personalised on request) and closing lace.

- SIZES:** from 20 liters up to 130 liters
- THICKNESS:** minimum 9 my up to maximum 28 my
- BAG PER ROLL:** from minimum 30 pcs for bags from 20 to 50 liters  
from minimum 15 pcs for bags from 70 to 130 liters

Complete the range of GFG products: industrial bags and reels in LDPE or eco plastic PLART™ , eco plastic PLART™ bin liners, protective hood for pallets in eco plastic PLART™
